Professional Profile

Information Systems Engineering student with a strong interest in Data Analytics and Process Automation. Dedicated to solving operational problems through data analysis, from database cleansing to creating clear visual reports. Curious, with critical thinking skills, and focused on learning new tools and integrating AI solutions to optimize operations and workflows.

Professional Experience

Teaching Assistant for Programming Paradigms, Universidad Tecnológica Nacional FRBA – Buenos Aires, Argentina Mar 2026 – present

- Delivered practical classes and technical lectures on programming paradigms, structuring complex content for diverse student audiences.
- Mentored students in analytical problem-solving and computational logic, fostering foundational skills applicable to data modeling and algorithm design.
- Conducted rigorous code reviews and logic evaluations, debugging complex problems and ensuring code efficiency—skills highly transferable to data quality assurance and query optimization.
- Translated abstract technical requirements into clear, actionable concepts, demonstrating strong communication skills essential for presenting data solutions to stakeholders.

Data & Systems Intern, Municipalidad de Tres de Febrero – Caseros, Buenos Aires, Argentina Aug 2025 – Dec 2025

- Designed and implemented data extraction and cleansing processes using Python (Pandas) and advanced SQL queries, consolidating information from multiple operational sources.
- Audited data quality using automated scripts, detecting and resolving inconsistencies, null values, and anomalies in relational databases.
- Developed interactive dashboards in Power BI, modeling data and utilizing Generative AI to accelerate the construction of complex DAX measures for key KPIs.
- Performed Exploratory Data Analysis (EDA) combining SQL and Excel to identify patterns, trends, and uncover operational bottlenecks.
- Collaborated cross-functionally with different teams to gather data requirements and drive digitalization and workflow optimization initiatives.
- Standardized technical documentation for data models and scripts, leveraging Large Language Models (LLMs) to streamline the process and facilitate data democratization.

E-commerce Administrative Assistant, Empresas VAC SAS – Remote July 2025 – Nov 2025

- Managed and cleansed inventory databases, applying AI-assisted text processing to standardize product records and ensure referential integrity across e-commerce platforms.
- Executed rigorous validation and Data Quality processes to guarantee the accuracy, consistency, and standardization of large-scale product catalogs and stock control.
- Identified and corrected discrepancies in operational data flows, mitigating stock errors and optimizing the reliability of commercial information for decision-making.

Education

Universidad Tecnológica Nacional FRBA, Information Systems Engineering – Villa Lugano, Autonomous City of Buenos Aires, Argentina Apr 2022 – Dec 2029

- Currently in second year.

Skills

Programming Languages & Databases: SQL (Complex Queries, Joins, Aggregations), Python (Pandas, NumPy), Node.js

Visualization & BI: Power BI (Data Modeling, DAX), Advanced MS Excel (Pivot Tables, Formulas), Data Studio

Data Analysis & Methodologies: Exploratory Data Analysis (EDA), Data Cleansing & Normalization, Data Quality Assessment

Cloud & AI Technologies: AWS, Azure OpenAI, Applied Generative AI (LLMs), Git/GitHub

Languages: Spanish (Native), English (B2 – Fluent technical reading)

Interpersonal Skills: Analytical problem-solving, critical thinking, active listening, autonomy
